Easily synchronise DelPro data with Nordic Cattle Data eXchange with DeLaval Sync

As you report events like inseminations or pregnancy checks in **DelPro™ FarmManager** or **DelPro™ Companion** they are automatically shared along with records of each milking session with the Nordic Cattle Data eXchange.

DeLaval Sync is an automated, simple to use service which helps to ensure that your animal information is available to other service providers without the need for double entry, saving you valuable time and providing peace of mind that your data gets to where it is needed.

For farms about to begin with DeLaval DelPro, existing herd data can be downloaded to populate your DelPro database at the start.

Customised code sets for each country make sure that events reported in DelPro are ready to be received by the respective national body.

Call your sales rep. today to hear more.
